Hot Tubs: From \$1300.00

- 40 Amp - \$1300.00
- 50 Amp - \$1500.00
- 60 Amp - \$1800.00

Conditions:

- Unfinished basement
- Minimal fishing
- Modern Breaker Panel (minimum 100 Amp service)

Breaker size must be obtained by your spa company. Be sure to let us know if you or your spa company will be supplying any materials. If so, your installation may be subject to a Time + Materials contract. Also, you supplied materials are not covered under our **Guarantee Policy (see: [Terms and Conditions](#))

Pools (In Ground): From \$1300.00

- Basic connection to Pump; Gas heater; Light kits (single or dual); Salt water chlorinator

Conditions:

- Unfinished basement;
- Minimal fishing;
- Modern Breaker Panel (minimum 100 Amp service);
- All equipment must be unpackaged and pre-mounted to side wall of home or to a small 2ft. x 2ft. panel-board, which the customer is responsible for providing if the equipment is to be located remotely from the home.

Pre-Planning:

**We suggest some pre-planning for operation of your pool lights. Most pool companies habitually simply run the pool light (14/2 cab time black cable) back to the location of the pump, heater and filter. However, this may not be an ideal location to manually control the pool lights.

Your Options:

1. When your Pool Company begins construction of the pool and excavation of your yard, have them run the pool light wires to a suitable location of your choice from which you would like to manually control the lights.

**All you need is a 120 Volt GFI receptacle.

2. Do not have them redirect the wires. We can custom install a manual on/off switch in a convenient location of your choice. For example, on the exterior wall near the back door or in your kitchen or family room. Additionally, you may purchase a remote control to operate your pool lights.

Note: An onsite evaluation is required for other site conditions including:

- Locating the equipment at the far end of the backyard or in a cabana shed etc.;
- Finished yard or trenching;
- Finished basement;
- Older Breaker Panel or Fuse Panel.

Pools (Above Ground): From \$875.00

- Install a new separate dedicated 15 Amp circuit with GFI protection to a backyard receptacle (not within 1.5 meters of the pool).

Conditions:

- Remember we do not provide trenching. Most customers accept an approved cable installed along the fence line;
- Customer must provide a small wooden 2ft. x 2ft. panel-board close to motor/cord for proper mounting of the electrical controls, i.e. receptacle, manual switch, chlorinator etc.

Aluminum to Copper Upgrading: From \$1750.00

Whole home wall receptacles & switches only

- Aluminum to copper device box retermination using appropriate ACS wire connectors, #14 solid copper extensions and new regular or decora receptacles & switches.

Conditions:

- Base price for small 3 bedroom semi or bungalow with unfinished basement;
- Customer must provide proper access to all wall boxes in all rooms by moving furniture, beds etc.

General Home Inspection: \$300.00

- This rate covers the Service Charge and allows for ½ hour of on-site labour.

****We encourage all customers to please send photos is available for any job quote to service@gauthierelectric.com**

****Please note that these are approximate costs and are intended to be interpreted as guidelines only for your budgeting purposes.**

****ESA Inspection Fees and GST not included**
